Quiz: More With Dictionaries

Context

Use the dictionary below to answer **ALL** of the questions regarding dictionaries. Consider you have a dictionary named `animals` that looks like this:

```
animals = {'dogs': [20, 10, 15, 8, 32, 15], 'cats': [3,4,2,8,2,4], 'rabbits': [2, 3, 3], 'fish': [0.3, 0.5, 0.8, 0.3, 1]}
```

Let's try a few ideas with this dictionary! If you want to try any of the code yourself, you can test it in the coding space from earlier in the lesson.

Quiz Question

Question 1

Match each description to the value it describes.

`[20, 10, 15, 8, 32, 15]`

Error

`[0.3, 0.5, 0.8, 0.3, 1]`

8

Error

Error

15

None

list

string

Description

Value

The data type of the keys in the dictionary.

The data type of the values in the dictionary.

The result of `animals['dogs']`.The result of `animals['dogs'][3]`.The result of `animals[3]`.The result of `animals['fish']`.
